TAKE THIS system ensures cyclic battery exchange in one group. The application helps to regular utilization of all batteries in charging station. Regular rotation in forklift optimizes their count and lifetime. The system chooses the charged battery with the longest time from charged and chooses it for ready to use.

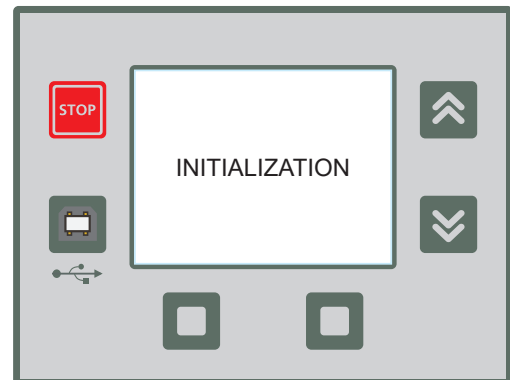

TAKE THIS system is consist of the FLEXIS chargers and TAKE THIS device with the smart application. The application monitors states of chargers in net and controls the signalization. Chargers and TAKE THIS device are connected by net cable with RJ45 connectors.

## FUNCTION

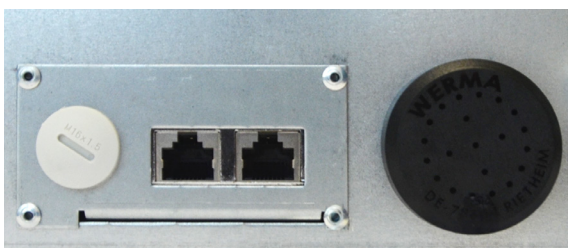

- The charger with battery which has the longest time from the end of charging is signaled by green LED on the top of the charger and number on TAKE THIS device display. If this battery is disconnected from charger then system marks another battery with the longest time from the end of charging. When the battery is incorrectly disconnected, e. g. out of order, TAKE THIS system activates warning acoustic signal.

The charging place number with the most suitable charged battery for use on the display.

Automatic initialization at startup

At the bottom part of TAKE THIS device are RJ45 connectors for data line and a warning siren.
